Re: Fre-Bar Inc., 1852 E. Blaine, needs to dispose of 172 gallons of water soluble oil.

At approximately 12:30 P.M. on Tuesday, January 26, 1988 I received a call from Marge at Fre-Bar. She said that they had approximately 172 gallons of water soluble oil, mixed with some water, in one of their underground storage tanks. They have a total of three underground tanks: (1) 8'X 32' and (2) 9'X 25'. The 8'X 32' tank has the oil in it. They get water soluble oil in bulk and store it in these tanks. Then they repackage it into small bottles to be used by auto parts stores. Apparently water had entered the tank and mixed with the oil giving a total of 172 gallons of emulsion.

I went to Fre-Bar and picked up the Material Safety Data Sheet on the oil. I then went to Bob Schaefer's office. He said that he did not want the oil in the sanitary sewer. I went back to our office and contacted Marge by telephone. I told her that Mr. Schaefer did not want the oil in the sanitary sewer but suggested that she give it to someone that uses water soluble oil, have a waste oil hauler pick it up or contact the manufacturer to see what they recommend.

On January 27, 1988 Marge called and informed me that Southwest Petroleum was going to pickup the material.
